FS 102 Study Skills Research Presentation

Collaborate with your group members and review all of the articles you gathered about your assigned skill. Then locate the page numbers in our text book (the green pages) that discuss your topic and review as a group. Based on the study skills articles reviewed and the information in our text, your group will create an interactive presentation to teach your classmates about your research. You will want to create a visually effective and informative six to ten minute presentation that highlights the importance of your topic and how the information you discovered can be used to increase your success as students.

At a minimum, you should include the following topics in your presentation:

- Why is your topic important? (In other words, why should we listen to your presentation?)
- What is an/are some example(s) of current research about your skill?
- are the key things we should know?
- How can your fellow classmates use this information to further their success in college?
- A demonstration of the study skills strategy.
- Handouts/manipulatives are encouraged; Professor Wells can make copies for you ahead of the presentation date.

A group grade will be earned based upon the Study Skills Research Presentation Rubric.
