Why Cite
Whenever you include someone else’s ideas in a paper, you must document or cite the source of the ideas. In other words, if you have learned anything new and include it in your paper, you must give credit to whoever provided the new information. Remember that failure to do so properly is PLAGIARISM.

How to Cite
To properly cite, you must include two different pieces of information in your paper.
1. Throughout your paper, you must identify the author and the page number of the material used. This is called the in-text citation or parenthetical citation.
2. At the end of your paper, you must create a list of resources that you cited in your paper. This is called the Works Cited list.

Basic Format of an MLA Research Paper (Chapter 4)
- Document should be double spaced with one inch margins, except for page numbers located at 0.5 inches.
- Your last name and the page number goes at the top of every page.
- The Works Cited list begins on a new page
